

# PROSTATE PET-CT

## TO OUR VALUED PROVIDERS

*Imaging Associates has expanded our service to the Prostate Cancer community by offering Illuccix Ga68 PSMA-11 Prostate PET CTs!*

*Until now patients have had to travel to the west coast for this option.*

**Illuccix®**, after radiolabeling with gallium-68, is a radioactive diagnostic agent indicated for PET scans of prostate-specific membrane antigen (PSMA) positive lesions in men with prostate cancer:

- With suspected metastasis who are candidates for initial definitive therapy
- With suspected recurrence based on elevated serum prostate-specific antigen (PSA) level

## How Illuccix is different from conventional imaging technology

A PET scan with Illuccix uses an advanced imaging tracer to target the specific PSMA protein on cancer cells throughout the body.

A PET scan with Illuccix may be able to detect cancer when PSA levels are low and when tumors are small or conventional imaging results are uncertain.

A PET scan with Illuccix can give your care team the information they need to determine the appropriate treatment plan for you when you have rising prostate specific antigen (PSA) levels.

## In order to facilitate and expedite pre-authorizations we ask referring providers to please include:

- Order stating PSMA PET with corresponding diagnosis
- Chart notes
- Copy of insurance card - front and back

## Preparing for a scan with Illucix

Patients should be fully hydrated the day before and day of exam.

Please call **907.222.4624** or email [businessdevelopment@imagingak.com](mailto:businessdevelopment@imagingak.com) should you have additional questions.
